Keep your POS cash safe and organised

Cash Drawers and Trigger Modules

Your cash drawer is part of your cash management system.

Cash drawers are an integral part of the POS system: it ensures your cash is kept safely and organised for staff to efficiently and correctly handle customer transactions. Your cash drawer is a crucial component that needs to be reliable in security, functionality and organisation.

To prevent mishandling and implement safeguards, choose a cash drawer that has multi compartments for each dollar value and a multifunctional locking system. This will also ensure faster checkouts and make it much easier to balance cash at the end of the day.

How much cash are you handling? If you are processing more card than cash payments, consider a flip-top cash drawer. Its slim design takes up significantly less space and can be embedded into the counter.

Ensure you have the best cash drawer to process tasks such as cash handling, counting money, and balancing the drawer. For help selecting or to discuss how to implement a cash drawer with your POS system, contact UMD sales.

Electrical Engineer Solutions

Model 319 Ethernet Module

The M120 UMD computer cash drawer was the 3rd standard UMD product introduced in 1983.
After 40 years, we are still making cash drawer trigger modules, with USB and ethernet interfaces.

Recently UMD's production team made the M319 ethernet cash draw interface.
